

RESIN GT 50

CHEMICAL COMPOSITION

MODIFIED GLUTARIC DIALDEHYDE

CHARACTERISTICS

Properties :	yellowish liquid
Active substance :	40/45 %
pH in solution at 10 % :	3,5 - 5

PROPERTIES

Low yellowing. Strong tanning action. Good softening effect. Helps the wetting-back in crust leather. Good exhaustion.

APPLICATIONS

Very effective in the pretanning of all types of leathers, specially for soft ones.

HOW TO USE

The amount to use in pre-tanning is around 2% based on pelt weight. Feed at a pH below 4,5 and gradually increase it to get a good fixation and a rise in the shrinkage temperature. As retanning agent for soft leathers, use about 3% referred to shaved weight, before neutralization. The addition at pH higher than 5-5,5 increases its astringency, and so a shrunken grain can be obtained by this way.

HEALTH AND SAFETY

Take the normal caution measures in the handling of chemicals. In case of contact, wash with plenty of water. In case of spill, attention to slippery floor ; remove by mechanical means and wash with water.
